Data Science Internship at Data Glacier

Healthcare: Persistency of a drug (Data Science)

Week 8: **Deliverables**

Name: Chooladeva Piyasiri

University: National Institute of Business Management (NIBM)

Email: *chooladevapiyasiri@gmail.com*

Country: Sri Lanka

Specialization: Data Science

Batch Code: LISUM18

Date: 26 March 2023

Submitted to: Data Glacier

Problem Statement

ABC is a pharmaceutical company. Medication persistency following a patient's doctor's prescription is a problem that ABC, a pharmaceutical company, wants to comprehend. Persistence of drugs is the duration of time a patient takes medication, from initiation to discontinuation of therapy. To automate this identifying process, this organization has contactedan analytics firm.

The analytics firm has to create a classification for the given dataset with the aim of gathering insights on the factors that are affecting the persistency.

Project Plan

Weeks	Date	Plan
Weeks 07	19 March 2023	Problem Statement, Data Collection, Data Intake Report
Weeks 08	26 March 2023	Data Understanding, Data Problems
Weeks 09	02 April 2023	Feature Extraction
Weeks 10	09 April 2023	Data Cleansing and Transformation
Weeks 11	16 April 2023	EDA Presentation and proposed modeling technique
Weeks 12	23 April 2023	Model Selection and Model Building/Dashboard
Weeks 13	30 April 2023	Final Project Report and Code

Data Understanding

The dataset contains 3423 observations with 26 columns and 68 features. The feature names and their data types are shown below.

```
Ptid                                                                 object
Persistency_Flag                                                     object
Gender                                                               object
Race                                                                 object
Ethnicity                                                            object

dtype: object
```

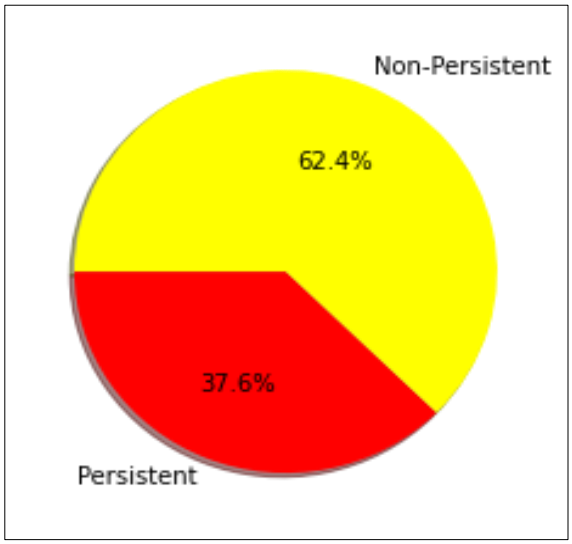
There are two numerical columns in the dataset, per the data type description. Which are:

- **Dexa_Freq_During_Rx**
- **Count_Of_Risks**

The Descriptive Statistics of those numerical features of the dataset are shown below.

	Dexa_Freq_During_Rx	Count_Of_Risks
count	3424.000000	3424.000000
mean	3.016063	1.239486
std	8.136545	1.094914
min	0.000000	0.000000
25%	0.000000	0.000000
50%	0.000000	1.000000
75%	3.000000	2.000000
max	146.000000	7.000000

The target variable of the dataset is "Persistency_Flag," - a flag indicating if a patient was persistent or not. There are 2135 non-persistent patients and 1289 persistent patients in this sample.



Data Problems

NA values

The dataset does not contain any NA values.

Skewness & Kurtosis

Count_Of_Risks

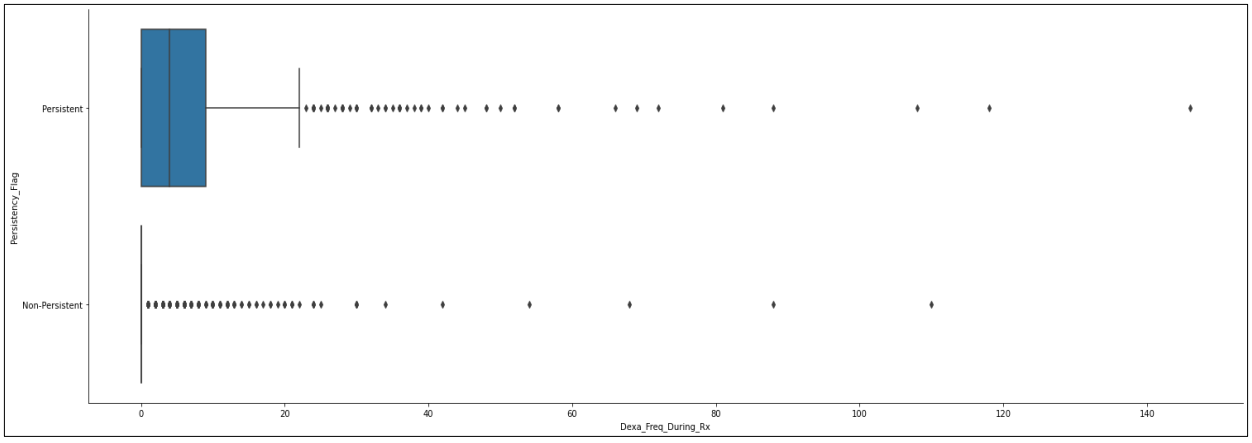
- ✓ The Count_Of_Risks distribution is moderately skewed. (0.879)
- ✓ The Count_Of_Risks distribution is Platykurtic (kurtosis <3). Compared to a normal distribution, its tails are shorter and thinner, and often its central peak is lower and broader. (0.900)

Dexa_Freq_During_Rx

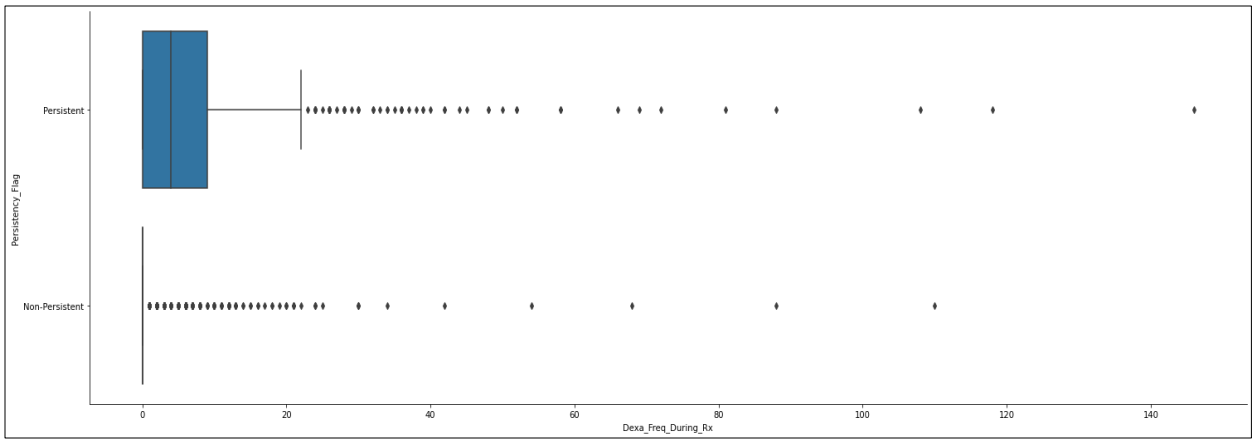
- ✓ The Dexa_Freq_During_Rx distribution is highly skewed. (6.808)
- ✓ The Dexa_Freq_During_Rx distribution is Leptokurtic (kurtosis >3). Compared to a normal distribution, its tails are longer and fatter, and often its central peak is higher and sharper. (74.758)

Outliers

Dexa_Freq_During_Rx



Count_Of_Risks



Both numerical features contain some outliers.
